Assignment 15: Website usability evaluation

<https://github.com/elovric13/eutech/tree/website-usability-evaluation-elovric13>

1. Select three websites belonging to the same industry or business sector.

The selected websites are pumpkin seed oil / specialty food producer websites:

- grbic.hr
- kocbek.si
- gea.si

2. Analyze each website and assign a score from 1 to 5 for each criterion

Grbić d.o.o. – grbic.hr

Ease of navigation - 3/5

The navigation is minimal and flat with six items. There are no drop-downs so the structure is flat. Finding specific products requires going through the Products page with no filtering.

Visual appearance - 2/5

The website has a clean, simple layout but feels outdated. There is no hero image, no modern typography, and the overall aesthetic does not match the premium quality of the product.

Readability of texts - 3/5

The product descriptions are well-written and informative, but the font is small and the line spacing is tight. There is no clear typographic hierarchy, headings and body text look very similar in weight and size.

Interesting facts about pumpkin seed oil...

Pumpkin seed oil contains a high portion of vitamin E, more specifically from 300 up to even 800 mg/kg, a high portion of phytosterols from 3.000-4.000 mg/kg, mineral of calcium 70-90 µg/g, potassium 110-300 µg/g, magnesium 150-250 µg/g, sodium 190-440 µg/g, phosphorus 450-950 µg/gram and some iron (ca. 15 µg/l).

Healthy food from the heart of Slavonia

Our mission is to achieve healthy and quality production by developing a strong brand of the Grbić name. In which traditional quality and modern knowledge of production are the most important. We want to be recognized as the leader in production and to provide our clients with the best starting from the field to the table.

[MORE ABOUT THE QUALITY](#)

Family farm Grbić d.o.o.

Grbić d.o.o. manufactures its own agricultural and food products, is involved in cooperative production with small manufacturers ready to follow the idea and vision of our company, as well as with trade, processing and services.

[MORE ABOUT US](#)

Mobile compatibility - 3/5

The mobile experience is functional but lacks any mobile-specific design thinking. The site is technically responsive and adapts to mobile screens.

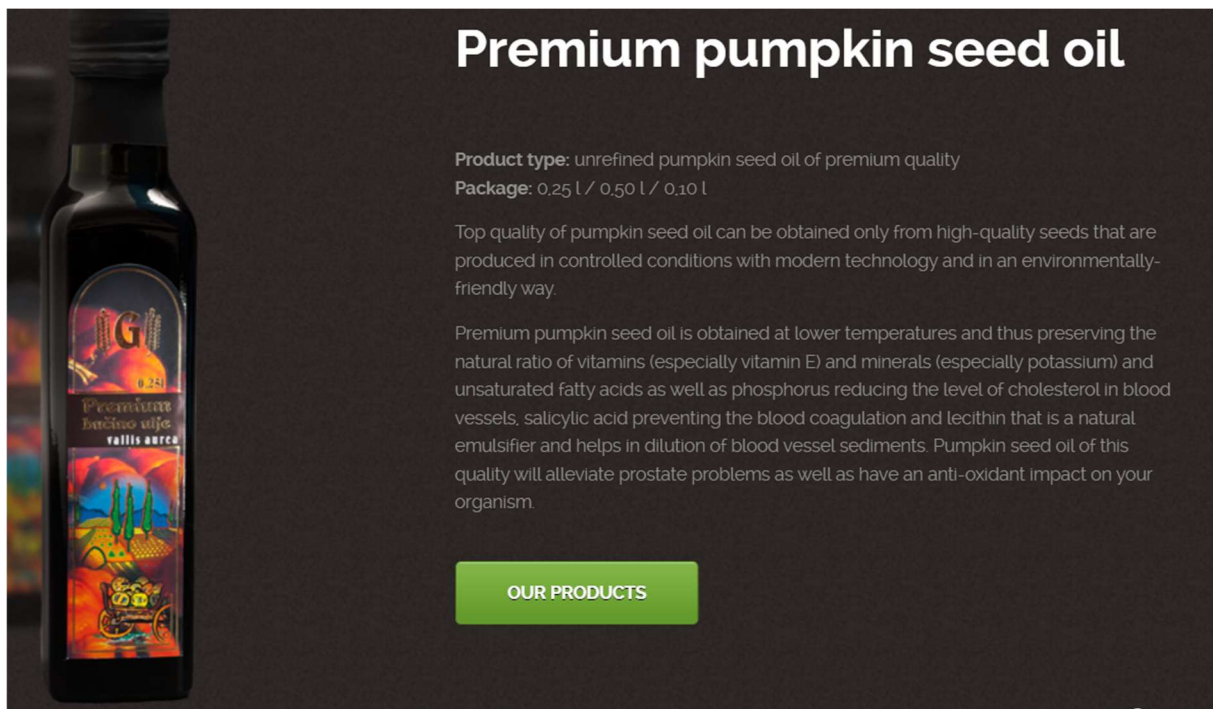

Accessibility - 2/5

The site offers a language switcher with six languages and highlights the active page in the navigation. However there is no search function and no other visible accessibility features.

User experience - 2/5

The site communicates the essential information, but doesn't interactive features, no search function, no recipes, no news, and no online shop. It functions as a digital brochure rather than a modern website experience.

Kocbek Oil Mill – kocbek.si

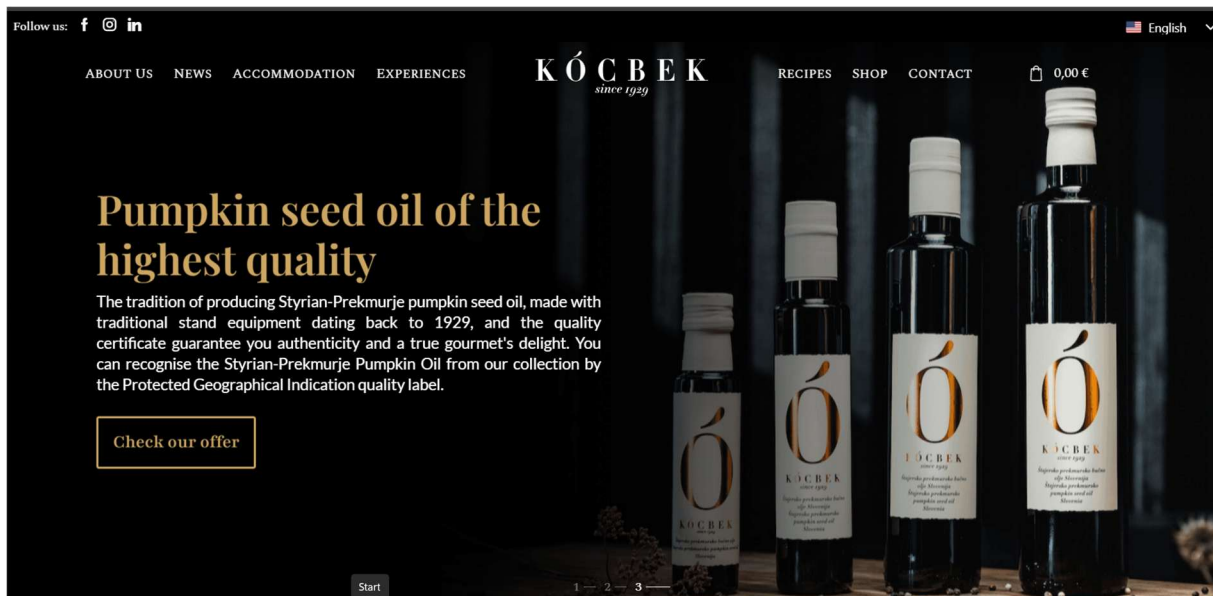

Ease of navigation - 4/5

Very well structured navigation with clear sections: About Us, News, Recipes, Shop, Accommodation, Experiences, and Contact.

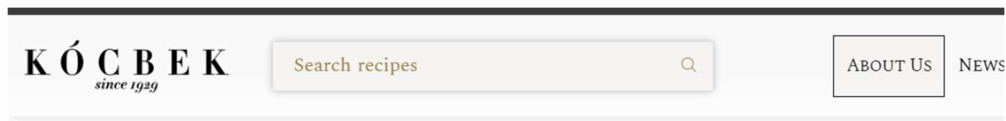

Visual appearance - 3/5

The website successfully conveys a sense of tradition, family, and luxury through dark moody photography, gold typography, and elegant product presentation. However the homepage relies heavily on animated effects and auto-advancing sections, which makes scrolling feel chaotic and works against the calm premium feeling the brand is trying to create.

Readability of texts - 4/5

Text is well-sized and readable with good line spacing. Headings are clear and well-differentiated from body text.

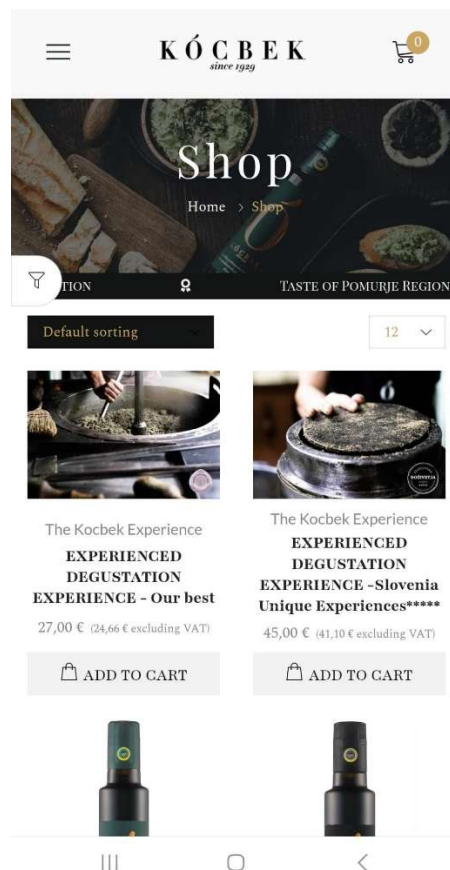

Kocbek Oil Mill

A story of three generations

Knowledge of **Alojz Kocbek** has been passed down and nurtured through generations, and today the responsibility of the family is borne by his grandson **Gorazd Kocbek**. Gorazd feels great respect and deep gratitude for this knowledge and continues to develop the brand. **KÓCBEK** as a forward-looking company, is closely linked to the past. His whole family stands with him and his daughter Kiana, who is already in love with the oil business, is also a proficient tinkerer in the local oil refinery.

Mobile compatibility - 4/5

The site uses a modern responsive theme and collapses properly on mobile. The hamburger menu works. Product pages and the shop are usable on mobile.

Accessibility - 3/5

The site includes a language switcher, visible social media links, and a cart icon in the navigation. However there is no search bar on the homepage, and the dark background with gold text, while visually elegant, offers lower contrast than standard accessibility guidelines recommend.

User experience - 4/5

The site has a clear commercial journey: land → discover products → buy → explore experiences. The online shop works, recipes add content value, and the accommodation/experiences section creates a strong lifestyle brand beyond just selling oil. Newsletter signup is present.

GEA Oil Factory – gea.si

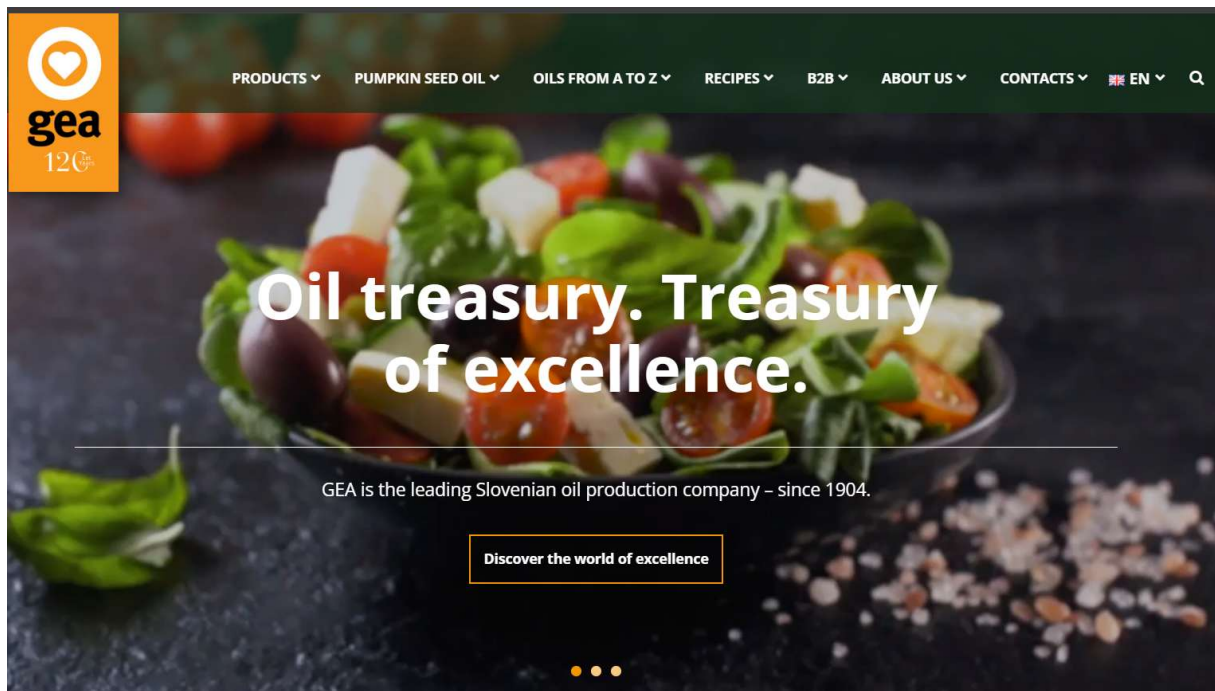

Ease of navigation - 4/5

The navigation has 7 primary items. Each item has a detailed anchor-link dropdown pointing to sections within single long pages.

Visual appearance - 3/5

GEA has a professional and clean visual design. The homepage opens with a full-width food photography hero and a clear tagline, which creates a strong first impression. The dark green navigation bar with white text is well-structured and readable. The overall aesthetic is corporate rather than warm or artisan, which fits a larger industrial producer but feels less personal than Kocbek or Grbić.

Readability of texts - 4/5

Headings are bold, uppercase, and clearly separated from body text with horizontal dividers. Body text is well-sized with comfortable line spacing and good contrast. The only weakness is that the rotating carousel on the homepage causes some content to disappear before the user has time to read it.

RICH TRADITION

Štajerska and Prekmurje, the two north-eastern regions of Slovenia, boast a long tradition of processing pumpkin seeds into oil. Historical records on pumpkin seed pressing and the oldest press, built in 1750 in Štajerska, testify that the tradition of pumpkin seed oil production started as early as in the 18th century. In the 19th century, the production of oil from pumpkin seeds expanded throughout the Štajerska and Prekmurje regions. Tovarna olja GEA, located in the heart of Štajerska, has been producing pumpkin seed oil since 1904.

THE BEST FROM THE BEST

The quality of pumpkin seed oil depends mainly on the quality of the pumpkin seeds used. The finer the quality of pumpkin seeds, the more exquisite the pumpkin seed oil produced. We at GEA are well aware of this fact.

GEOGRAPHICAL INDICATION

The Ministry of Agriculture, Forestry and Food of the Republic of Slovenia has granted GEA pumpkin oil a certificate declaring that Tovarna olja GEA produces pumpkin seed oil of Štajerska and Prekmurje with geographical indication. The GEA pumpkin seed oil of Štajerska and Prekmurje therefore rightfully belongs among the protected special Slovenian agricultural products and foods.

In 2012, oil entered in the Register of European protected geographical indications (PGI).

Mobile compatibility - 3/5

GEA adapts well to mobile. The layout restructures into a clean single column, the navigation collapses into a hamburger menu with search and language switcher visible, and product pages are well-structured with clear headings, readable text, and properly sized images. The main weakness on mobile is the navigation dropdown — the many anchor-link submenus can be difficult to navigate on a touchscreen.

Accessibility - 3/5

The navigation includes a search icon, which is the most useful accessibility feature among the three sites. Language switcher and active page highlighting are also present but are standard features shared across all three sites. No other notable accessibility features are visible.

User experience - 3/5

GEA provides strong educational content about pumpkin seed oil, its production, health benefits, and culinary uses. The recipe section is well-developed. The online shop is only available in the Slovenian version of the site, which is a significant gap for international visitors.

3. Create a comparison table containing all the scores

Criterion	Grbić (grbic.hr)	Kocbek (kocbek.si)	GEA (gea.si)
Ease of navigation	3 / 5	4 / 5	4 / 5
Visual appearance	2 / 5	3 / 5	3 / 5
Readability of texts	3 / 5	4 / 5	4 / 5
Mobile compatibility	3 / 5	4 / 5	3 / 5
Accessibility	2 / 5	3 / 5	3 / 5
User experience	2 / 5	4 / 5	3 / 5
TOTAL	15 / 30	22 / 30	20 / 30

The website with the best overall usability: Kocbek (kocbek.si) with a total score of 22 out of 30. It leads in navigation, readability, mobile compatibility, and user experience, offering the most complete and commercially functional website of the three.

The website with the weakest usability: Grbić (grbic.hr) with a total score of 15 out of 30. The site communicates the essential information but lacks modern design, interactive features, and any commercial functionality, functioning more as a digital brochure than a proper website.

4. Suggest at least five improvements for each website.

Grbić d.o.o. - grbic.hr

1. Redesign the visual layout with a modern hero image and updated typography to better reflect the premium quality of the products.
2. Add an online shop or at minimum a direct order form per product so visitors can purchase without having to call or email.
3. Add a search function to help visitors find specific products or information quickly.
4. Add a recipes or blog section with regularly updated content to improve SEO and give visitors a reason to return.
5. Highlight certifications (BIO, Halal) more prominently on the homepage as they are strong trust-builders currently buried in product descriptions.

Kocbek Oil Mill - kocbek.si

1. Reduce or replace the animated effects and auto-advancing sections on the homepage to create a calmer, more premium scrolling experience.
2. Add a persistent search bar visible on all pages given the large number of products and content types.
3. Ensure all content is fully translated into English, as several blog posts remain in Slovenian on the English version.
4. Reduce the shop navigation dropdown from 20+ categories to 5-6 top-level groups to avoid overwhelming new visitors.
5. Improve text contrast - the gold text on dark backgrounds, while visually elegant, does not meet standard readability guidelines.

GEA - gea.si

1. Make the online shop available in the English version of the site, as currently international visitors have no way to purchase directly.
2. Update the news section - the last post is from 2019, which signals inactivity and undermines credibility.
3. Replace the rotating homepage carousel with static featured sections so visitors have time to read all content.
4. Add a warmer, more personal tone to the brand storytelling - the current corporate feel distances the site from the artisan quality of the product.
5. Add a direct inquiry form in the B2B section so potential business partners have a clear and immediate way to get in touch.
